AuthentiCare Mobile Application 2.0

iOS Operating System

Introduction

First Data offers an Android and an iOS mobile application (app) for workers to use as a means of Check-In/Check-Out, both in English and in Spanish. These AuthentiCare mobile applications provide the same capabilities as the Interactive Voice Response (IVR) and, with GPS technology, have the ability to base their validation process on the location of the mobile device. The following sections detail features of each AuthentiCare mobile app, and list the setup processes to prepare providers and workers for mobile application operation and the steps for workers to utilize AuthentiCare mobile app features to process Check-Ins/Check-Outs of client service visits.

Note: The AuthentiCare Mobile Application 2.0 is available for use on iOS operating systems 11.0 and newer.

Users of mobile phones with operating systems prior to 9.3.6, may be able to log in, but may have an issue that could impact GPS location performance and date and time accuracy.

Service Zones

In a **Standard Service Zone**, GPS location coordinates can be determined. GPS coordinates are captured and used to match (verify) the location of the mobile device during Check-In/Check-Out against the client's GPS coordinates on record. The mobile app does not validate the clients' locations against their physical addresses. Instead the mobile app is being sent the GPS coordinates to validate each client's location.

In a **Limited Service Zone**, there is no internet access/data coverage. GPS location coordinates can still be captured most of the time. The banner on the mobile app screen displays in a dark red color in a Limited Service Zone with the message, "No data connection."

If the worker gets to a client visit location that is outside the Standard Service Zone, the worker will proceed through the same Check-In and Check-Out steps. The data is stored on the mobile device as the Check-In and Check-Out are completed. The visit will display as "Not synced."

A Warning Message is displayed after 60 minutes when there are claims not synced on the mobile device informing the user to return to a Standard Service Zone with internet coverage.

When the mobile device detects its return to a Standard Service Zone, a sync of the Check-In/Check-Out data will automatically begin. Once the data is synced, the banner on the screen will return to its original color, and the visit will display as Completed.

Application Setup

Core AuthentiCare Preparation

The following settings have been set by First Data at the application jurisdiction level, typically across the whole state:

- The mobile messaging feature has been turned on.
- Messaging from the provider to the worker is enabled.
- Message expiration has been enabled.
- The Consumer ID (QR) card order and scan is enabled.
- The GPS geo-fence distance has been set so that there is a defined maximum distance surrounding the Client's location that can be acquired on the application without creating an exception on the claim. An Exception is an indicator that a worker is found outside of the specific radius of a Client's home. Exceptions are triggered on Check-In and Check-Out.
- The timeout duration is set (in minutes) before the mobile app logs the worker out of the system due to inactivity. The timeout duration is 60 minutes.
- The worker's mobile app session token expires every night at 4 AM ET.

Application Setup Done by Providers

One Time Application Settings

- The Provider and Worker must be active within Phoenix and have active IDs.

Requirements

1. The worker must be active within Phoenix with an active ID.
2. The worker must have access to an iOS device with an operating system 11.0 or newer with network access.
3. A network must be available to log in.
4. GPS must be enabled.

Workers planning to use their personal cellular phones or other mobile devices will be required to have installed the AuthentiCare Mobile App 2.0 prior to registration in the Phoenix system. Please see the instructions, [For Workers: Downloading, Installing and Setting Up the AuthentiCare Mobile App](#) in this guide for this information.

Provider Mobile App Worker Registration - Phoenix Provider Portal

Before a worker can use the AuthentiCare Mobile App, the provider must log in to the Phoenix Provider Portal and register the worker and the worker's phone or other mobile device. From the Phoenix Provider Portal, the user will click the **Workers** tab.

Office Number	Office Number

1. Enter a mobile password to be used by the worker for the initial login to the mobile app. The mobile password must follow the password rules located above the Mobile Password field.
2. Select **Show Password** for displaying the password as it is typed. You will be Required to re-enter or “confirm” the new password.
3. Enter a worker’s **Email Address** to be used by the worker for requesting a passcode in order to reset a password without contacting the provider.
4. You must select **Save** for these changes to take effect. Once the user saves the mobile app information, the password entered will no longer display on the screen. The provider may also use this field to reset a worker’s mobile password.
5. Click the **Add mobile device** link.

The office number in Phoenix is not required.

Mobile Devices

To add a new mobile device for this worker click "Add another mobile device", fill in all fields, then click "Save".

4. Enter the phone or mobile device number, without parentheses or dashes, and the Device ID.
5. If more than one worker will use the device, click the **Shared?** check-box.
6. To add additional devices, click the **Add mobile device** link.
7. Once all information has been keyed, click **Save**.

*Each worker will have to be marked as mobile enabled and given a password on the **Workers** tab.*

AuthentiCare Mobile App Fundamentals

For Workers: Downloading, Installing and Setting Up the AuthentiCare Mobile App

The AuthentiCare application is a free mobile app.

Steps for Workers to download the AuthentiCare Mobile App from the Apple Store are:

1. Open the Apple Store on the mobile device.
2. Select the AuthentiCare Mobile App for download.
3. Tap **ALLOW** for the app to make and manage phone calls.
4. Tap **ALLOW** for the app to access the mobile device's location.

These terms and conditions must be accepted prior to the app opening on the mobile device.

Initial Setup

Once the Mobile App is installed, initial setup needs to occur. In order for the worker to use the AuthentiCare Mobile App, the worker will need to:

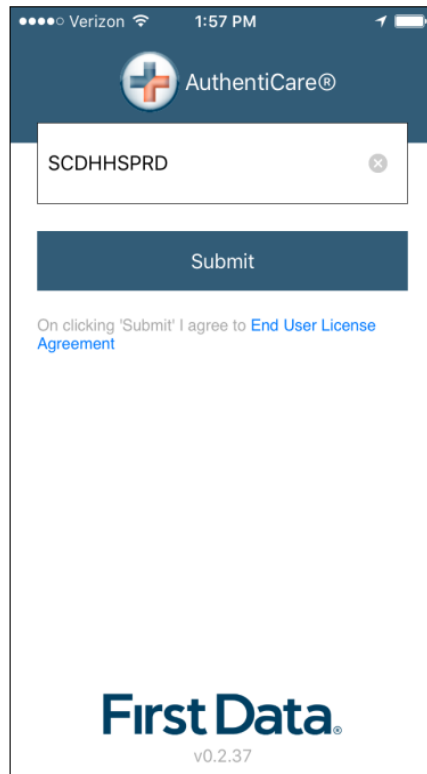

1. Confirm the Provider has entered the mobile device/phone number, email address and Device ID in Phoenix.
2. Use the Setup Code to choose the environment.

When the worker first opens the AuthentiCare Mobile App, the worker will see a screen that requires the entry of a Setup Code. The AuthentiCare Mobile App allows the use of one or two modes (called environments):

- the Test/Training Environment, (used for practicing and learning about how to use the app), or
- the Live Production Environment (used when you are going to perform actual client care)

The worker will choose which option to use by entering one of the codes below:

Test/Training SCTRAINPRD or Live/Production SCDHHSPRD

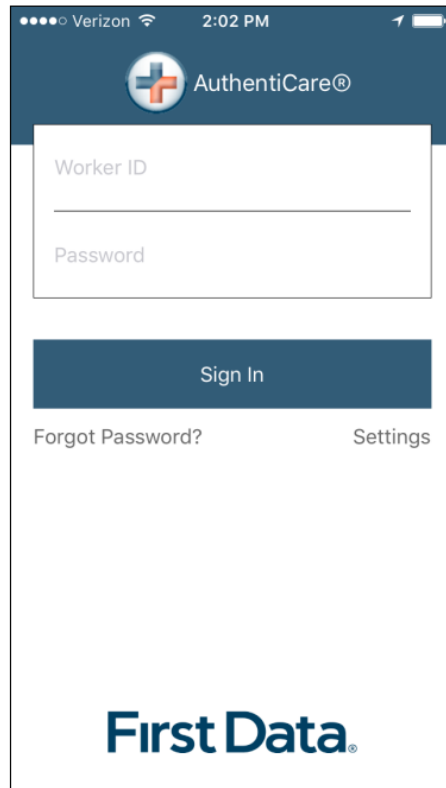

The link to the End User License Agreement is on the Setup Code screen.

The worker will:

1. Enter the choice of environment in the **Setup Code** field.
2. Review the End User License Agreement from the agreement link.
3. Tap **SUBMIT** which saves the Setup Code and signifies the acceptance of the End User License Agreement.

The Worker ID Login and Password screen displays.

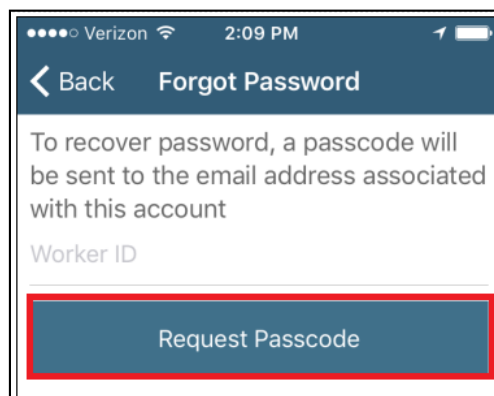

The choices of **FORGOT PASSWORD?** and **Settings** are also found on this screen.

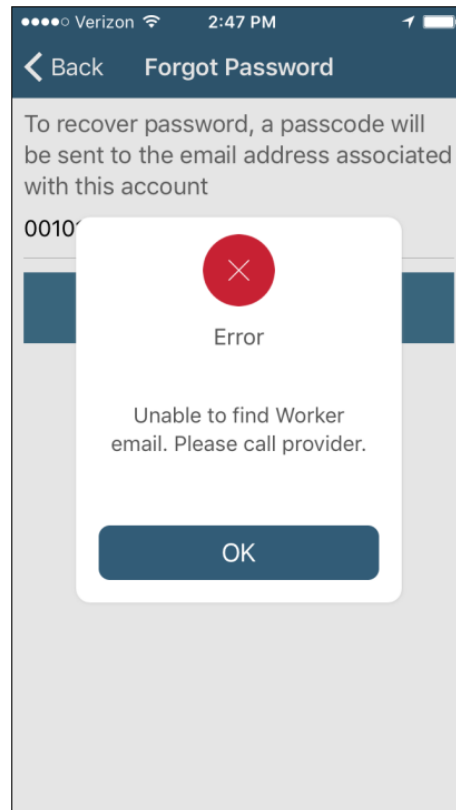

A worker who has forgotten the password can tap **FORGOT PASSWORD?** The Forgot Password? screen displays, complete with instructions.

To recover a password, the worker must have an email address listed in Phoenix.

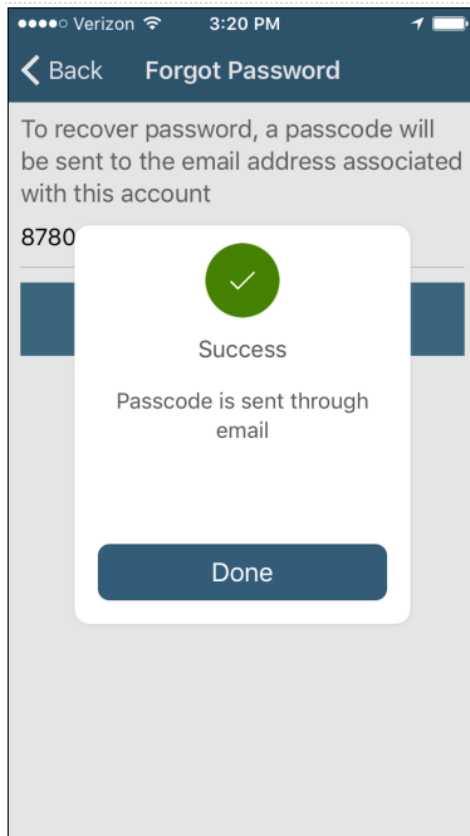

1. Input **Worker ID**.
2. Tap **REQUEST PASSCODE**.

If the worker's email address is not in Phoenix, the following screen will display with the instruction to call the provider.

Once the worker's email address is in Phoenix, the following screen will display:

Tap **Done**.

The Change Password screen displays.

Verizon 4:26 PM

< Back Change Password

Passcode Show

New Password Show

Password must consist of 9 to 50 characters, and include:

- At least one number
- At least one uppercase letter
- At least one lowercase letter
- At least one special character(@#\$%^&?!+=)

Confirm New Password Show

Confirm Password must match New Password

Submit

The worker will:

1. Enter the passcode sent through email in the **Enter Passcode** field.
2. Enter the new password in the **New Password** field. The password rules are listed on the screen.
3. Confirm the new password by entering the new password again in the **Confirm New Password** field.
4. *Scroll down* to tap **Submit**.

If there is a need, the worker may start the process again.

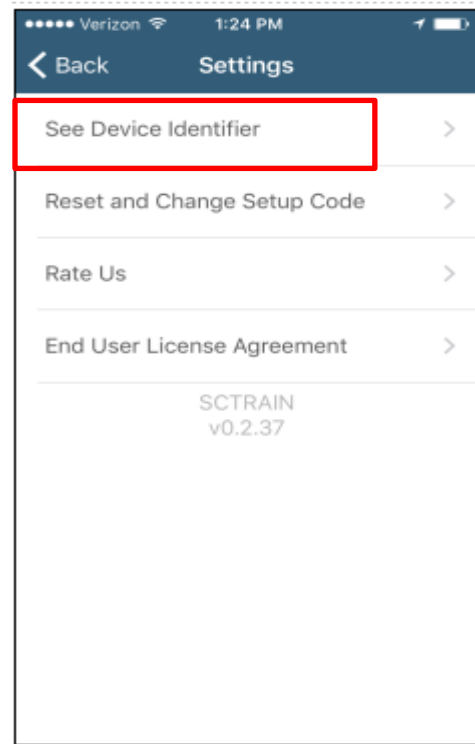

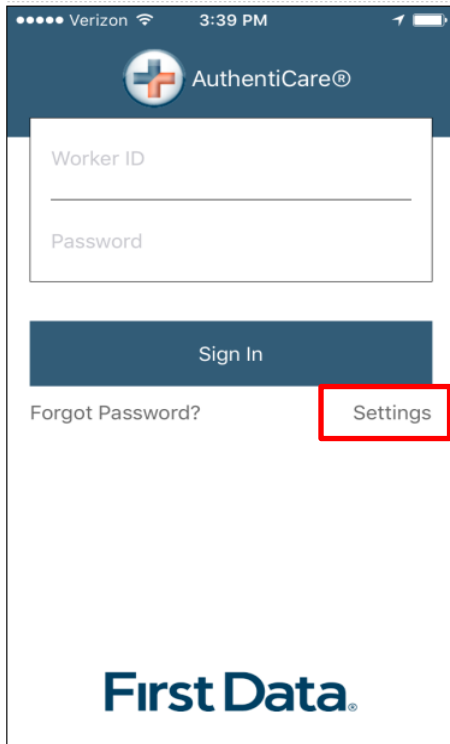

To Find a Device ID from the Settings Menu

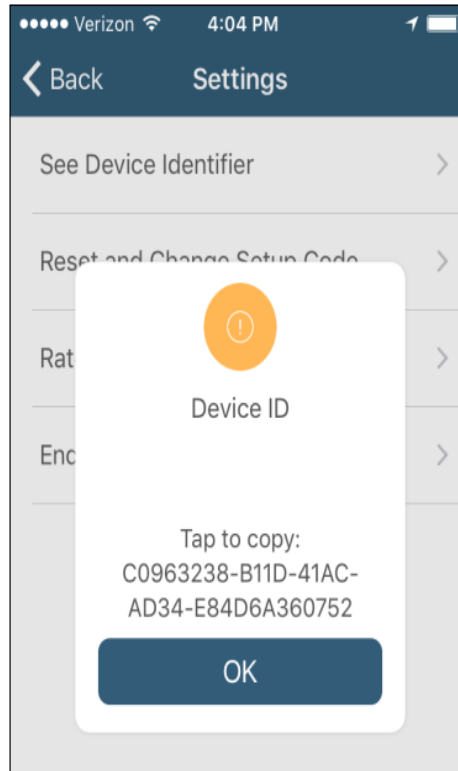

After entering the Setup Code, the worker will be taken to the login screen.

To find the mobile device's Device ID:

1. Tap **Settings** at the bottom right of the screen. The Menu displays.
2. Tap **See Device Identifier** in the Menu. The Device ID displays. *The Device ID will change when the worker installs the AuthentiCare 2.0 app.*

3. Tap **OK** to close the window.
4. *Assure the provider has the correct Device ID.* (The worker can copy the Device Identifier, and email it to the provider.)

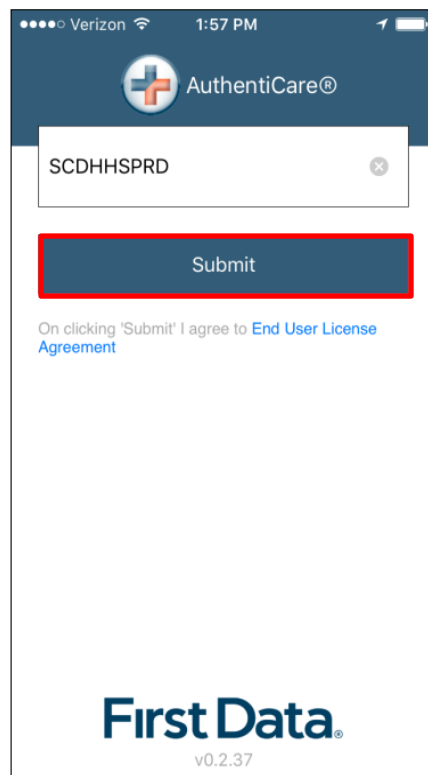

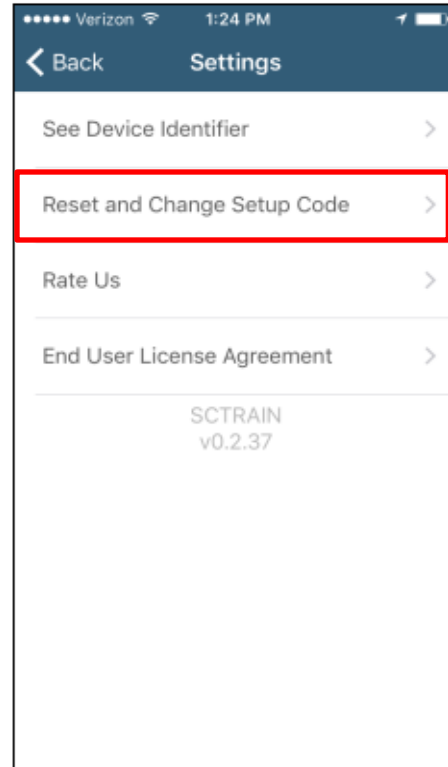

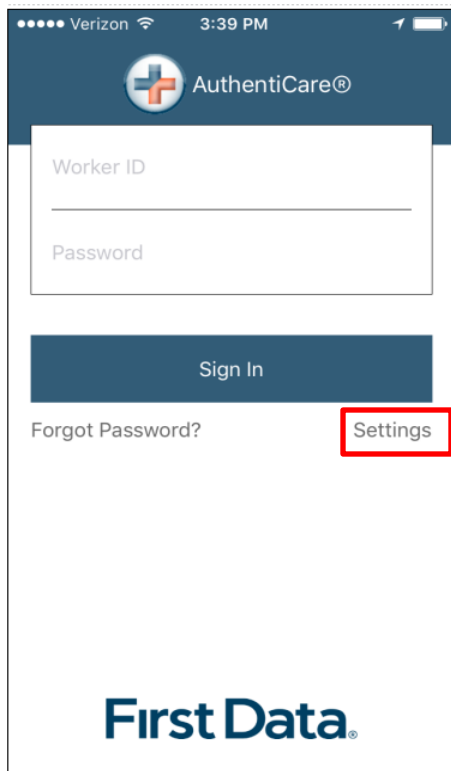

Clearing Data to Change from One Environment to Another

In order to switch from one environment to the other, the worker will be required to clear the data from the app.

- Clearing data is necessary *only* when switching between environments.
- **Remember that if the data is cleared from the live environment, the worker will lose any data that has not been uploaded to Care Call.**

The worker will need to make sure that all data has been uploaded before leaving the Live/Production environment. To clear the data:

1. Tap **Settings** at the bottom right of the screen. The Menu displays.
2. Tap **Reset and Change Setup Code** in the Menu.
3. Enter the next Training or Production environment in the **Setup Code** field.

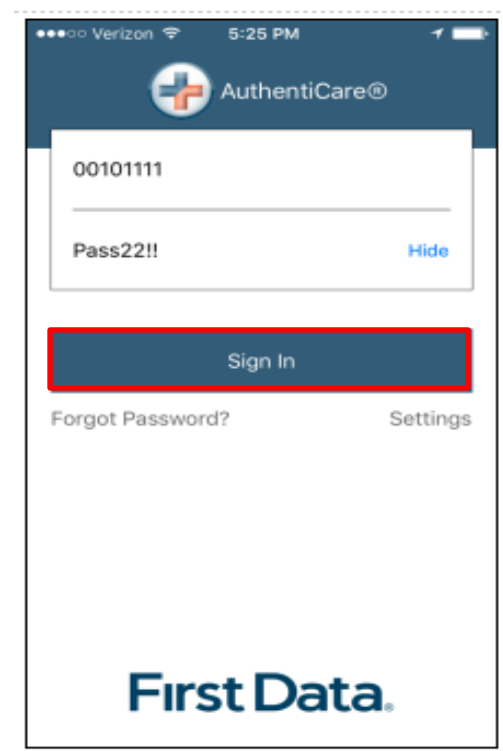

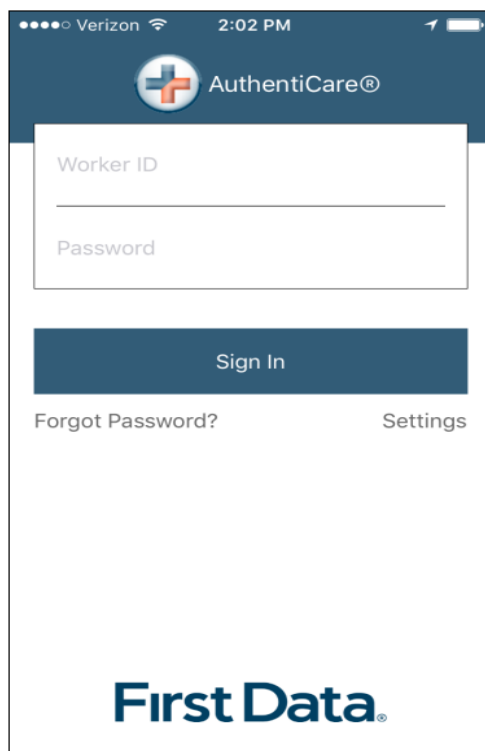

4. Tapping **Submit** indicates agreement with the End User License Agreement and the data from the previous environment is removed.

To Log In to the Mobile App – First Use

Change the temporary password assigned by the provider to log in.

On the Login screen:

1. Enter the Worker ID.
2. Begin typing the password which the displays **Show** so the password displays as typed. Tap **Hide** to cancel the display of the password.
3. Click **Done** on the keyboard to display the full screen or simply tap **Sign In**.
4. Tap **Sign In**. Tapping **Sign In** logs the worker into the app for the session.

After 6 unsuccessful attempts to log in, the worker's account will be locked.

The worker will have to:

1. Call the provider to unlock the account.
2. Enter the new temporary password assigned by the provider.
3. Begin the process again of entering and confirming a new password.

Once the Worker ID and Password are entered, the worker's session begins.

PLEASE NOTE:

*Workers can log in to create a session for the day when and where they have internet access, and then drive to the client's location to process a Check-In for client service delivery. Logging in to begin a session is **not** the same as processing a Check-In for client service delivery.*

To Log Out of the Mobile App

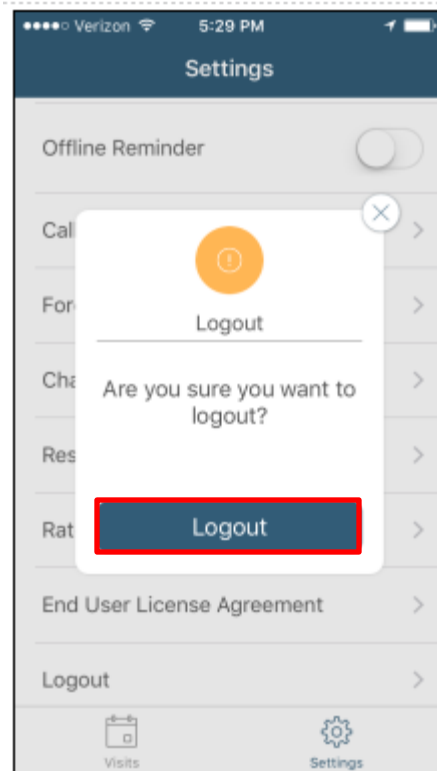

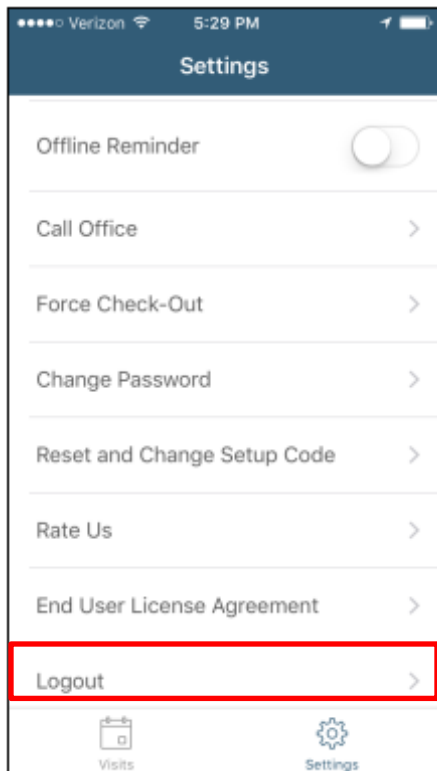

A Log Out of the Mobile App is different than a Check-Out of a service visit. There are reasons for a worker to log out of the mobile app:

- The worker is done for the day, OR
- Another worker will be using the same mobile device to perform a Check-In or a Check-Out.

PLEASE NOTE:

Before performing a logout, the worker needs to ensure all Check-Ins and Check-Outs are complete. At the end of the day the worker will need to return to a place where there is a data connection in order for the data to be sent to the Care Call system. To log out of the AuthentiCare Mobile App, the worker will:

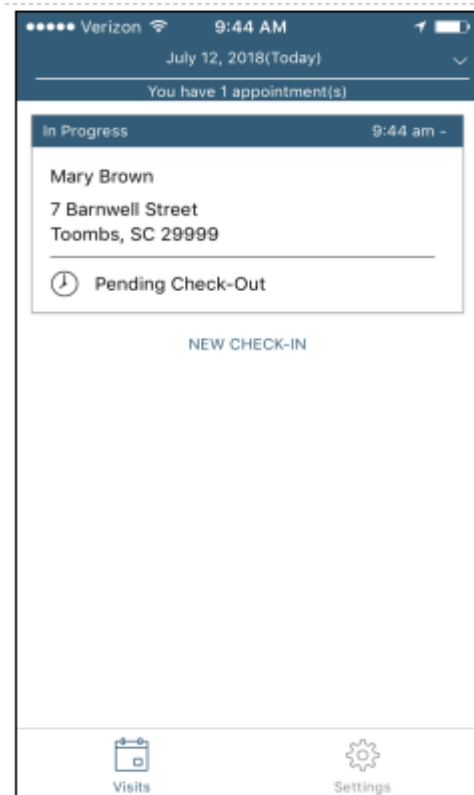

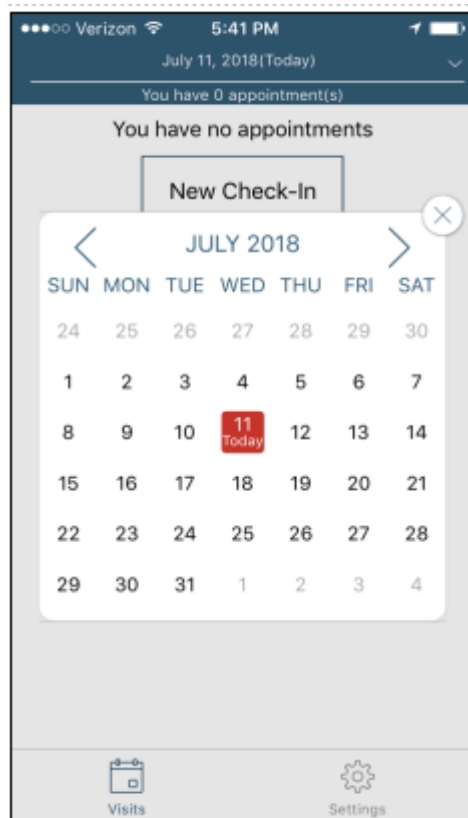

1. Tap **Settings** found at the bottom right of the screen.
2. From the Settings Menu, tap **Logout**.
3. The Confirm Logout message displays. Tap **Logout** to log out.

To Access the Calendar

To access the calendar, workers will:

1. Log in to the mobile app using the Worker ID and Password.
2. Tap the **current date (Today)** at the top of the mobile screen to open the calendar.
3. The calendar defaults to the current date. Tap the calendar date to display any completed and/or pending visits for the current date.
4. Tap and scroll to display past dates. Tap the highlighted chosen past date to view any completed and/or pending visits for that date,

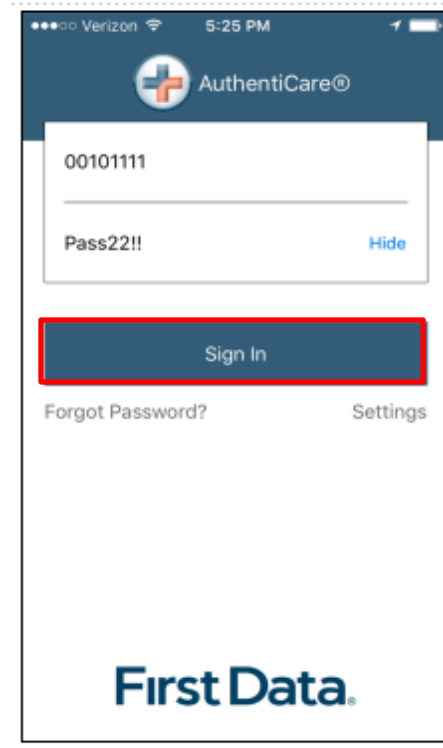

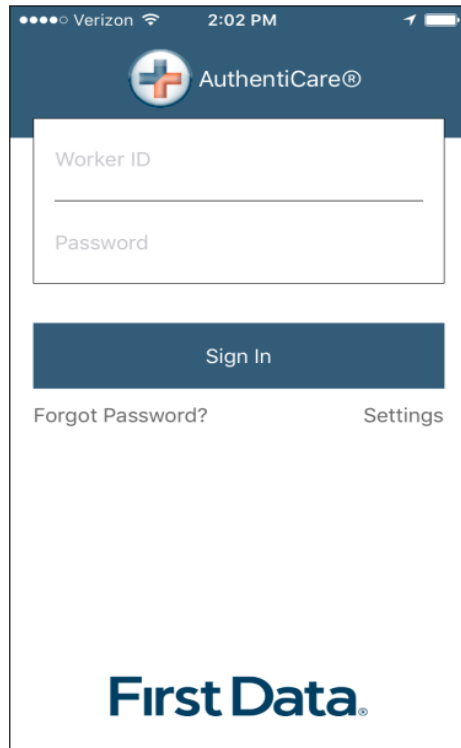

Worker Check-In: One-Client Service Visit, One Service

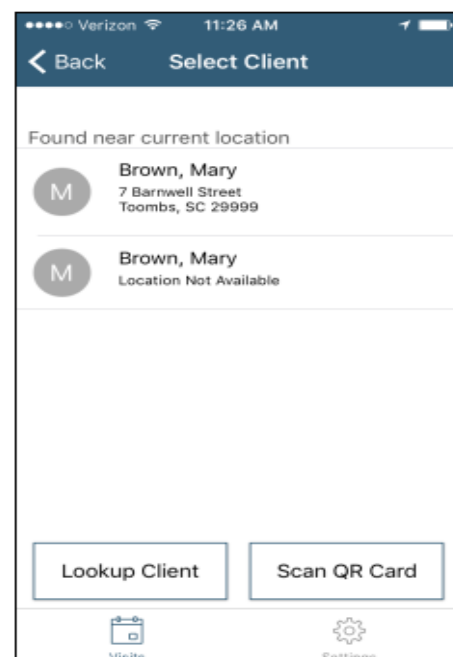

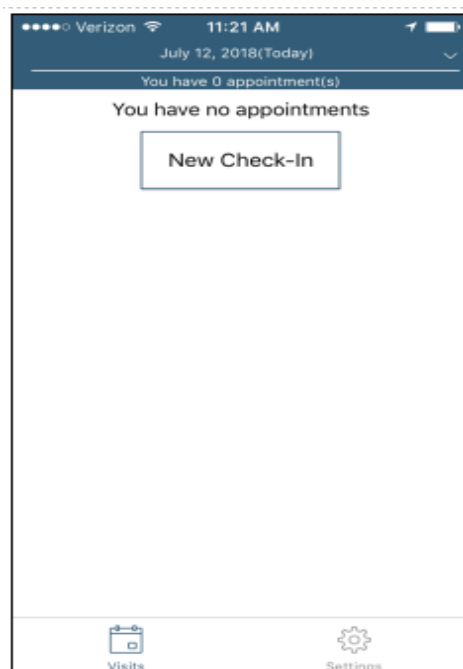

The Check-In

When the worker arrives at the client location, the worker will:

1. Open the AuthentiCare Mobile App.
2. Input **Worker ID** and **Password** to begin the session.
3. Tap **Done** on the keyboard to remove the keyboard or tap **Sign In**.

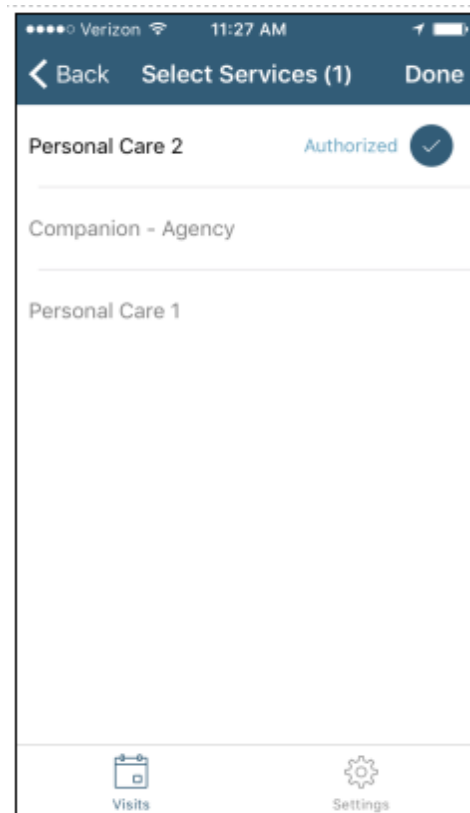

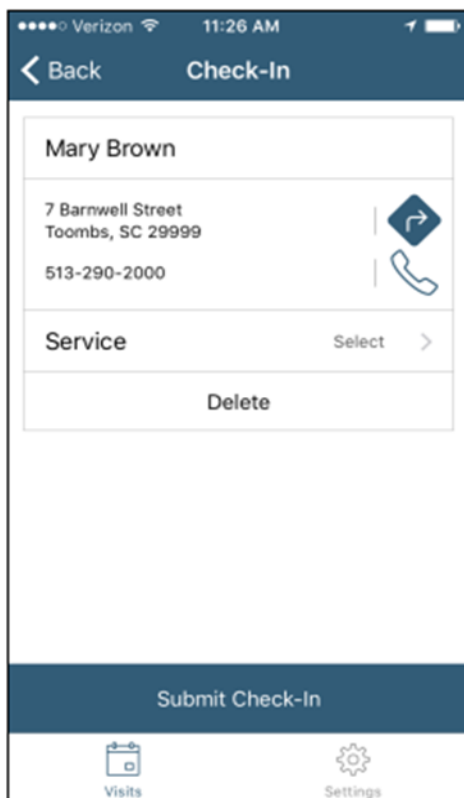

4. Once the keyboard is removed, tap **Sign In**.
5. “You have 0 appointments” displays in the date banner. The worker will tap **New Check In**.

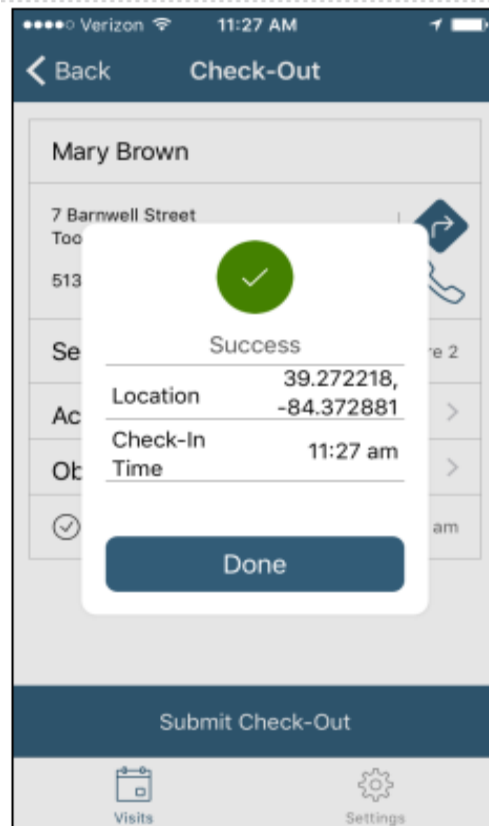

6. The Select Client screen displays with a list of any clients found near the current location of the mobile device. If the client's name is on the list, tap that **client's name**.
7. Tapping a client name displays the Check-In screen.
8. Tap the Services field to display a list of services on the Select Services screen.

Authorized services are noted to the right of the service name designated by [Authorized](#).

9. Tap the **Service** for the worker visit that day by tapping the .

10. The client name appears on the Appointment screen. Tap the client name field.

11. Tap **Submit Check-In**.

The Check-In Success page displays with GPS Location coordinates and the Check-In Time.

15. Tap **Done** to fully display the visit check-in details on the Check-Out screen.

Submit Check-Out

Visits Settings

16. When services are completed, follow Check-Out process described in [Worker Check-Out: For One or More Clients.](#)

No Clients Found

When processing a Check-In, and a tap of the New Check-In does not display a client list or if the client's name is not listed on this screen, the screen will display "No clients found."

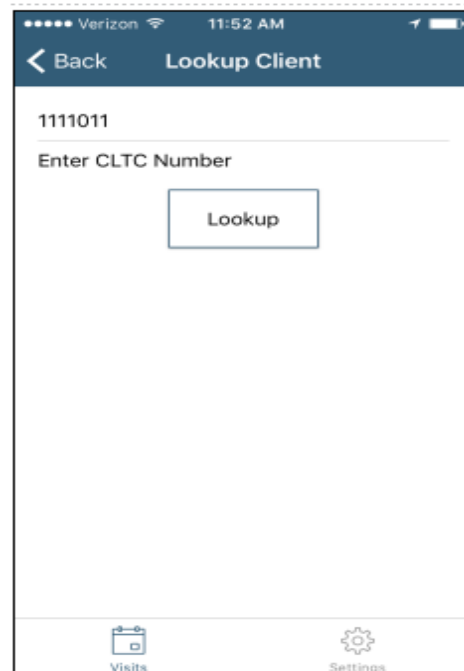

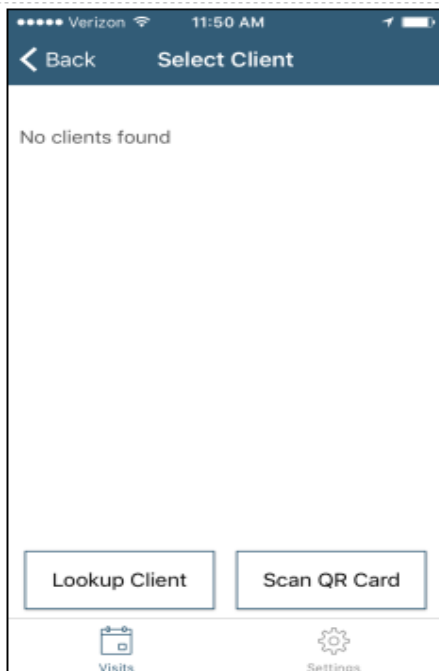

The worker will:

Tap either **Lookup Client** or **Scan QR Card** found at the bottom of the screen to process the Check-In.

To Enter the CLTC Number

The worker will:

1. Tap **Lookup Client** to open the Lookup Client screen.
2. Input the **CLTC Number**.
3. Tap **Lookup**.

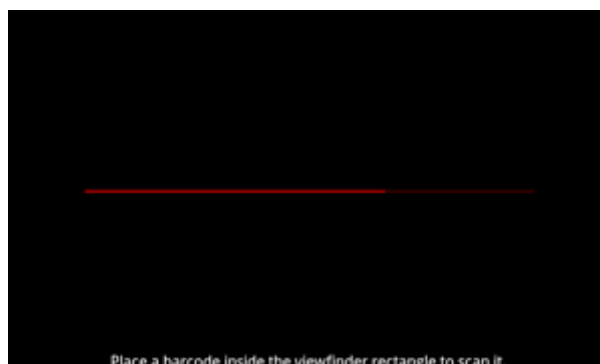

Follow the remainder Check-In process steps detailed in [Worker Check-In: One-Client Service Visit, One Service](#).

To Scan a Client's QR Card

Scanning the QR Card is a solution to the absence of a landline in an area with no cell coverage, (data connection), and/or when GPS coordinates may not be determined.

1. Tap **Scan QR Card**.
2. Follow the prompt to download and install the barcode scanner.
3. Hold the phone/mobile device up to the code on the QR Card approximately 4 to 6 inches away.
 - The Mobile device will turn on the Camera function and a flashing red line will appear.

4. Place the code from the QR Card  inside the viewfinder rectangle to scan.

- The QR code can be scanned regardless of the orientation of the QR Card (right side up, on its side, or upside down), as long as the code is located in the viewfinder. The camera will actively scan the code and there is no need to "take a picture" of the code.
- The screen will indicate it has identified the QR code.
- Follow the remainder Check-In process steps detailed in [Worker Check-In: One Client Service Visit, One Service.](#)
- GPS coordinates from the Check-In are displayed to the mobile device user when GPS coordinates are found. (This is the process if the client lives in a Standard Service Zone.)
- *Note: If the worker is consistently having issues obtaining GPS coordinates or is in a "Limited Service Zone", the worker will have the option of requesting a QR Card.*
- *Note: If the worker needs to do multi-services for that client, they will need to do separate Check-Ins with the QR Card. Without a data connection, the app cannot check to see if the client is authorized for multi-service(s).*

Worker Check-In: Multiple Clients Service Visit

After logging in, the worker will:

1. Tap on the first client's name.
2. Select the service(s) that will be performed by checking the box to the left of the service name.
3. Tap **Add Client** from the list of available clients to add the other client the worker is there to serve.
4. Select the service that will be performed for the client just added. The original service and the service for the added client must be services that can be paired.
5. Continue adding clients until all clients and services to be provided are added.
6. Scroll through to make sure all clients are listed with the correct service(s).
7. When finished, tap **Submit Check-In**. All clients selected will be checked in.
8. Tap **Done** on the Check-In Success screen.

Worker Check-In: Multi-Services Service Visits

The Mobile App allows workers to perform multi-service visits. Multiple check boxes are available in the Service List if a service may be paired. "Authorized" displays to the right of the service name if the service is authorized for that client. After logging in, the worker will follow the process steps in [Worker Check-In: One-Client Service Visit, One Service](#), and then:

1. Tap **OK** after selecting two services that can be paired.
2. Tap the **Submit Check-In** button.

Worker Check-Out: Multiple Clients Service Visits

A multiple client Check-Out is handled the same as a one-client Check-Out.

The worker will:

1. Access Check-In information from the Appointment screen.
2. Tap **Activities** to select one or more of the Activities from the list; tap **Done**.

3. Tap **Observations** to select either “No observations to report” or one of the observations from the list; tap **Done**.
4. Tap **Submit Check-Out**.
5. Follow the same procedure with the remainder of the client list.
6. When finished with the remainder of the client list, tap **Submit Check-Out**.
7. The application will display Check-Out Success. Tap **Done**.

The Appointment screen will then display that all clients’ visits are in Completed status.

Worker Check-In: Clients in a Location of Separate Living Quarters

If there are multiple Clients at a location such as an apartment complex, the worker will need to do a New Check-In to find his/her specific client. After logging in, the worker will:

1. Tap on **New Check-In**.
2. On the Select Client screen, select the first client for the visit.
3. Choose service for the client, and then tap **Done**.
4. Tap **Add Client**.
7. Follow steps 2 – 4 to add the second client.
8. Tap **Submit Check-In**.
9. Process the Check-Out by tapping **Submit Check-Out** after providing services, entering all Activities and Observations, if required. Repeat for each client.

If there are no clients found at the mobile device’s current location, the Select Client screen will display, “No clients found.” The worker will:

1. Tap **Lookup Client** found at the bottom of the screen, and follow the steps to enter the client’s CLTC number found in [To Enter the CLTC Number](#).
2. The client’s name displays.
3. Tap on the client’s name to process a Check-In.

4. Repeat the process to check in additional clients.

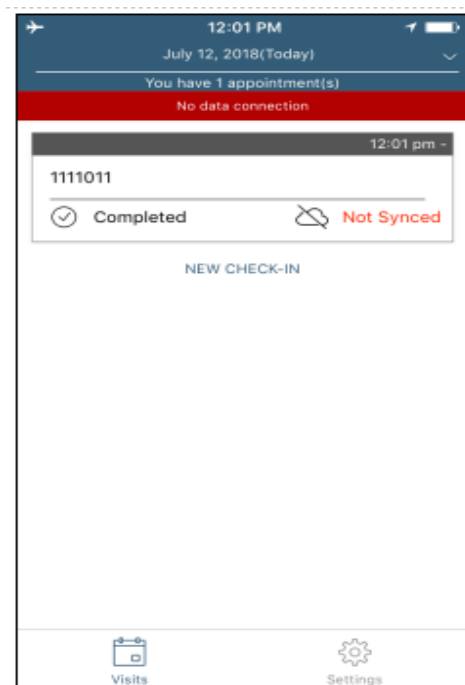

Worker Check-In: Order a QR (Quick Response) Card

The Client ID card uses the technology of QR codes (2D barcode) to allow client verification and works in conjunction with the AuthentiCare Mobile Application.

To begin the daily session, workers will need to log in to the app in an area with a data connection, even if they are not yet at the client's home. When they arrive at the client's home they will process a Check-In whether or not there is a data connection.

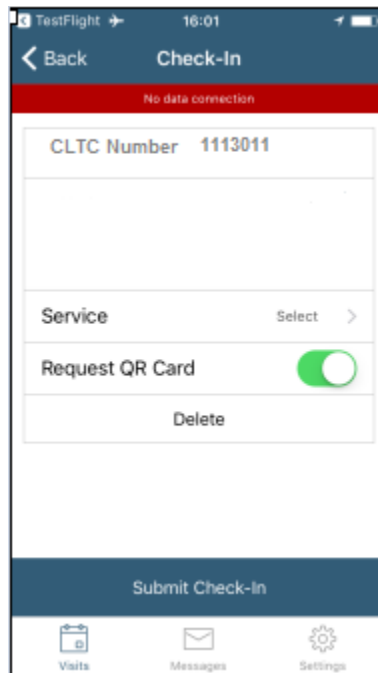

When the login occurs with no data connection, the worker will follow the process steps in [To Enter the CLTC Number](#). The screen will display with the banner message, "No data connection."

- The client name is NOT displayed because the app does not have a data connection in order to research the name and to determine whether or not the name should be displayed.
- The CLTC number can be displayed.

The worker will:

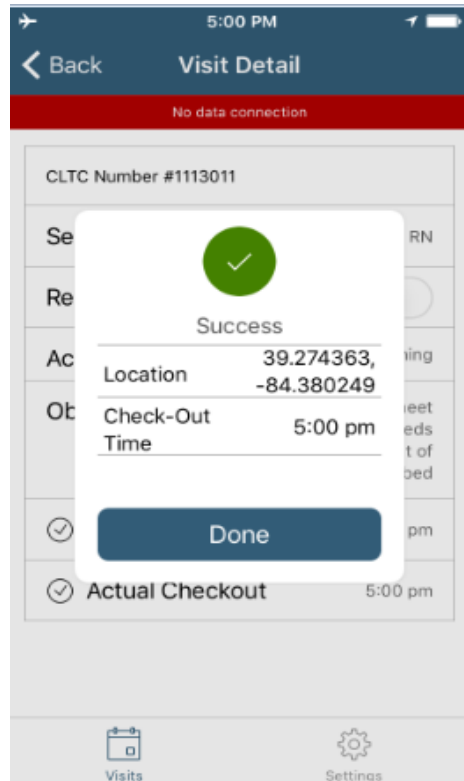

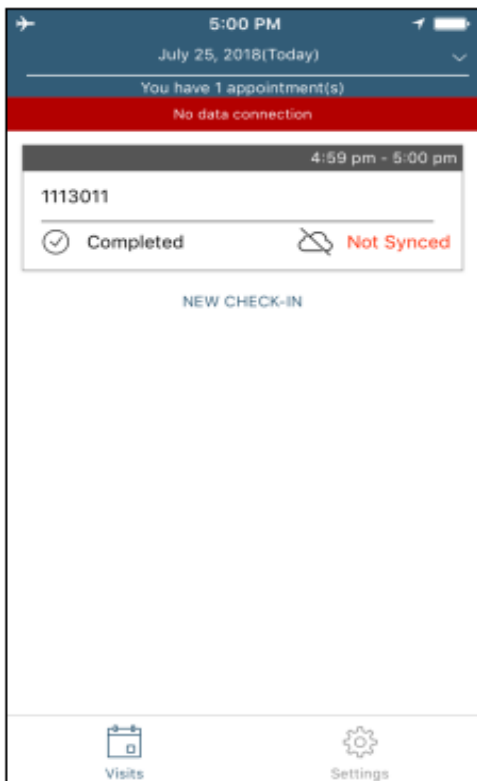

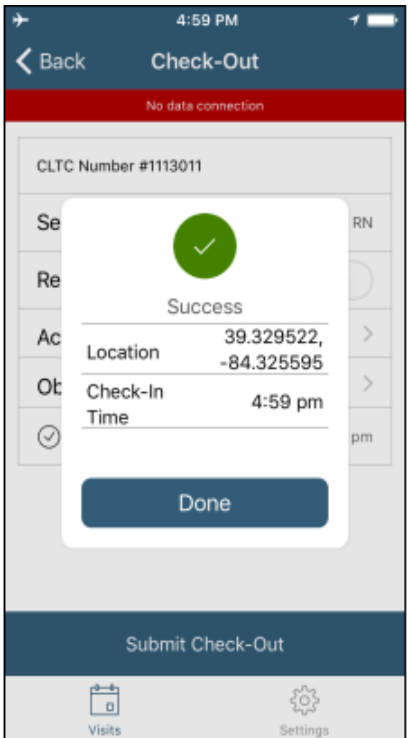

1. Slide the button to the right to **Request QR Card**.

2. Add the **Service(s)** for the client visit.

3. Tap **Submit Check-In**.

As long as the mobile device has no internet access, all screens throughout the Check-In and Check-Out process will display the banner message, "No data connection."

- The worker will continue with each action to progress throughout the Check-In to Check-Out for the service visit.
- Since there is no data connection, the Check-In, the QR Card order, and the Check-Out are queued until the mobile device enters a location where internet connection is available.
- When the mobile device returns to a location with a data connection, and the message “No data connection” disappears, all visit data transmits to the Care Call system.
- When the visits have been transmitted to Care Call, the “No data connection” will disappear and the red banner will return to its original color.
- Once visits no longer have the “No data connection” message, the QR Card has also been ordered.
- It typically takes 5 to 10 days to process the QR Card order and to get the card mailed to the client.
- At the end of the day, the worker will need to return to a place where there is a data connection in order for the claims to be sent to the Care Call system.

Worker Check-Out: For One or More Clients

For each client served, the worker will:

1. Access Check-In information from the Visits screen.
2. Tap **Activities** to select one or more of the Activities from the list; tap **Done**.
3. If required, tap **Observations** to select one or more of the Observations; tap **Done**.
4. Depending on the service, multiple selections on both Activities and Observations are possible. Check these as required.
5. Tap **Submit Check-Out**.
6. Follow the same procedure with the remainder of the client list.
7. When finished, tap **Submit Check-Out**.
8. The application will display Check-Out Success. Tap **Done**.

The Visits screen will then display that all clients’ visits are in Completed status.

AuthentiCare Mobile App Basics

There is an abbreviated Menu accessed from Settings even before a worker logs in. After a Worker Login, the worker will tap **Settings** at the bottom right on the screen to open the Menu with a full array of choices. The following choices display:

See Device Identifier

A tap of this choice allows the mobile device’s Device ID to display.

Offline Reminder

A slide of this button allows the worker to receive a reminder of the mobile device's offline status.

Call Office

A tap on this choice automatically makes a call from the worker's mobile device to the agency telephone number registered in Phoenix.

Force Check-Out

A tap on this choice allows a capture of the time and location of a visit for a Check-Out when the worker has forgotten, or has been unable, to process a Check-In.

Change Password

A tap on this choice enables the worker to process a password change, before being locked out, without having to call the agency for a temporary password reset. Once the worker is locked out of the Mobile App, the worker will have to contact the provider to reset the password.

Reset and Change Setup Code

A tap on this choice allows the worker to reset the app from one jurisdiction to another.

Rate Us

A tap on this choice allows the worker to rate the AuthentiCare Mobile App.

End User License Agreement

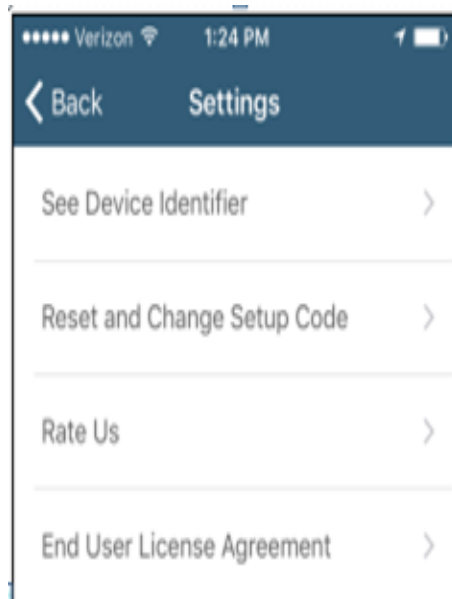

A tap of this choice displays the full agreement for the worker's review.

Logout

A tap of this choice enables the worker to log out of the mobile app. All needed data should be saved before a log out.

Two Different Menus

Abbreviated Menu Before Log In:
