

CLTC Interactions with Targeted Case Management

Medicaid Targeted Case Management (MTCM) includes services that may help a Medicaid-eligible individual gain access to doctors, social services, educational resources, jobs and other services. The individual will be assessed on an ongoing basis, and options will be provided by the assigned Targeted Case Manager which will assist with meeting the individual's needs.

Target populations

- Individuals with intellectual and related disabilities
- At-risk children
- Adults with serious and persistent mental illness
- At-risk pregnant women and infants
- Individuals with psychoactive substance disorder
- Individuals at risk for genetic disorders
- Individuals with head and spinal cord Injuries and related disabilities
- Individuals with sensory impairments
- Adults with functional impairments

Freedom of choice

If an individual becomes eligible for Medicaid, he/ she may choose to participate in MTCM. If the individual enrolls, he/she will choose a MTCM case manager, who can...

- figure out what services the individual needs
- help get needed services
- help with the individual's problems
- provide ongoing support

The individual also has the right to change Medicaid Targeted Case Management providers at any time.

The individual retains the right to access other Medicaid services/ programs for which he/she is eligible. The individual must choose between MTCM and the CLTC waivers. An individual may not participate in both MTCM and a home and community based waiver program. A child may participate in the Children's Personal Care Aide Program and MTCM.

SCDHHS must be contacted to assist in making this change,
